| ■ Front suspension, steering & underframe | ■ Rear suspension & underframe |
| ■ Exhaust system | ■ Transmission |
| ■ Fuel system | ■ Brakes |
| ■ Road test | ■ Wheels & tyres |

The vehicle with registration number:

BL65OTJ

PASSED the AA Mechanical Check for Used Vehicles.

Report Number: **AMC543682**

Date: **11 February 2019**

AA Engineer: **Dharma Sharma**

AA MECHANICAL CHECK

Dealer's Name: M4 Van Centre

Report Number: AMC543682

Status: PASSED

M4 Van Centre
Marlborough Road

Swindon
SN3 6AA

KEY FOR POINTS IN FOLLOWING SECTIONS:

	Pass	--	Could not be checked
	Fail	N/A	Not applicable

Please note: Right = Off side (O/S) and Left = Near side (N/S) as viewed from the driver's seat.

General Information:

Registration: BL65OTJ
Make: NISSAN
Model: NV200 ACENTA DCI
Mileage at start of inspection: 41326
Colour: GREY

Body Exterior Fittings:

Window & screen glass:

Bonnet hinges:

Bonnet catch:

Sunroof operation:

Door locks/operation:

Fuel filler cover/cap:

Number plates:

Convertible roof operation:

128-Point Vehicle Inspection

Vehicle Inspection

Road Test:

Test distance: 5 miles
Speed achieved up to: 55 mph

Final drive operation/noise:	✓	Steering effort:	✓
Gearbox operation/noise level:	✓	Hot restarting:	✓
Engine performance:	✓	Auto changes/kick-down:	N/A
Engine noise:	✓	Road holding/stability:	✓
Excess smoke:	✓	General steering/handling:	✓
Overheating evidence:	✓	Footbrake operation:	✓
Instrument/control function:	✓	Hand/park brake operation:	✓
Cooling fan operation:	✓	Suspension noise:	✓
		Warning lights:	✓

Items/parts not checked by the Engineer are:

- a) Oil and fuel consumption.
- b) Source of oil leaks.
- c) Brake lining material (other than what is immediately visible and be seen without dismantling any part of the vehicle).
- d) Brake fluid for contamination. Brake fluid will deteriorate over a period of time and we advise that it be replaced as recommended by the vehicle manufacturer.
- e) Cylinder compression, vehicle electrics and electronics which would require specific diagnostic equipment.
- f) Catalytic converter. If this is assessed by the Engineer as having passed the AA Vehicle Inspection, such a comment only relates to confirming its external condition, gas tightness and security. The Engineer is unable to confirm its internal condition or effectiveness as this requires exhaust emissions testing, which is beyond the scope of the AA Vehicle Inspection.
- g) The accuracy of in-car computer systems (for example, but not restricted to, computers used for route finding, fuel efficiency or otherwise).
- h) Exhaust emissions.
- i) Air conditioning efficiency.
- j) Vehicle technical Systems – Many vehicles are fitted or equipped with automatic or computerised operating systems, which may be controlled by microprocessors. These include engine-management systems, fuel systems, ignition systems, air-conditioning systems, lambda-controlled systems, stereo, radio cassettes, amplifiers, compact discs (single and multi), TV/DVD, satellite navigation, active and self-levelling suspensions, gearboxes, turbo-chargers and superchargers, anti-locking braking systems, four-wheel drive and electronic lockable differential units, traction control, alarm and immobiliser systems, catalytic exhaust/DPF systems, and variable camshaft timing systems. It is not within the scope of the AA Vehicle Inspection to check the detailed operation of these systems due to the many variations in features and operating modes of all cars, and it is not possible to confirm that these systems are functioning fully and/or to the manufacturer's design specifications. As a result, the Engineer will give an overall view and opinion on their performances generally, but neither the AA nor the Engineer will be liable to the Dealer or any third party for failing to identify any malfunction or failure of any of these systems to perform to the specification as designed by the manufacturer.
- k) Non-standard accessories as a result of personal modifications or otherwise.
